

YASH SOLANKI

AI-driven Application Engineering | Functional Application Management

Voorburg, Netherlands | +31-682684403 | solankiyash7227@gmail.com

LinkedIn: [linkedin.com/in/yashsolanki27](https://www.linkedin.com/in/yashsolanki27)

Work Authorisation: Netherlands (HSM Visa – Transferable to IND Recognised Sponsors)

PROFILE SUMMARY

Application Support Engineer (3+ yrs) across enterprise CRM and OSS/BSS platforms — **ITIL v4**, RCA, SLA-driven — including a **100M+ subscriber** government telecom deployment (**BSNL**, India). Extending into AI-driven operations: building **RAG**, agentic workflows (**LangChain/LangGraph**), and **LLM**-based intelligence layers (eDO AI, AI in a Box) on production telecom systems. Strong in **Python** and **GenAI-assisted diagnostics**. Currently at **FGS B.V.**, Netherlands, on a transferable **HSM visa** — open to Application Support, Functioneel Beheer, and **AI-driven Application Engineering** roles.

CORE SKILLS

Application Support & ITSM: L2/L3 Application Support, ITIL v4 Incident Management, Root Cause Analysis (RCA), SLA Compliance, MTTR Reduction, Escalation Management, Role-Based Access Control (RBAC), Microservices Environment Troubleshooting

Telecom Domain: OSS/BSS, CRM, Order-to-Activate (O2A), Provisioning & Activation

AI/LLM Engineering: Python, RAG, LangChain, LangGraph, MCP, Agentic Workflows, Tool Calling, Embeddings, Vector Search, Vector Databases (pgvector), Structured Output Generation, Context Window Management, LLMops, Token Cost Optimization, Evals, LLM Observability (LangSmith), Guardrails/AI Safety Validation

AI-Driven Application Intelligence: LLM-Driven RCA Automation, Ticket Triage & Routing, Duplicate/Similarity Detection, Clustering, Classical NLP, Text Classification, Human-in-the-Loop AI Design, Cross-Module Dependency Mapping, GenAI-Assisted Diagnostics

Databases & Operating Systems: MySQL (Data Validation), Linux/Unix

Cloud & Enterprise Platforms: Microsoft 365 Administration, Azure AD (User Access & Sync Management), Azure AI Services, Docker, Kubernetes

API Testing & Enterprise Tools: Postman (REST/SOAP APIs), JIRA, Zendesk, BMC Remedy

Delivery & Methodologies: Agile/Scrum (User Stories), Release Deployment, Functional/Flow Testing, Defect Management

PROFESSIONAL EXPERIENCE

Application Support Engineer – CRM Application Support

FGS B.V. | Rijswijk, Netherlands | Jun 2026 – Present

- **GenAI-Assisted Diagnostics & Automation:** Deployed Claude and Python scripting into CRM incident investigation and Functioneel Beheer workflows, accelerating log parsing and reducing manual documentation effort during day-to-day support.
- **SLA & Incident Ownership:** Managed day-to-day incident resolution across Microsoft 365 / Azure AD, resolving user access issues, workflow failures, and sync errors while consistently meeting SLA targets.
- **Gen-AI Analytics & Agentic Workflow Deployment:** Building agentic workflows and structural metadata optimization layers for FGS's early-stage AI in a Box / CX platform rollout, enabling secure, governed text and data analytics for enterprise clients.

Senior Engineer – AI-Driven Operations & Product Support (OSS/BSS)

Whale Cloud Technology India Pvt Ltd | Hyderabad, India | Apr 2025 – Jan 2026

- **SLA & Incident Management:** Optimized end-to-end Order-to-Activate (O2A) throughput by 18%, drastically reducing workflow exception queues across a 100M+ subscriber environment, by applying ITIL v4 incident management frameworks to resolve CRM-to-OSS state-transition blocks, collaborative waiting failures, and masterless order discrepancies via system re-trying.
- **Microservices & Data Integrity:** Secured zero-defect data integrity between CRM and OSS by executing targeted MySQL database queries to resolve backend discrepancies, correcting spatial parameters for 2,400+ service instances, and driving cross-vendor bulk migrations of 55,000+ active directory numbers across core telecom platforms.
- **AI-Driven Ticket Intelligence:** Built LangChain-based retrieval chains on top of RAG + embeddings for duplicate ticket detection, orchestrated via LangGraph for multi-step reasoning driving LLM-based RCA generation and triage/routing on eDO — tool calls exposed via MCP, traced/debugged through LangSmith, output quality gated by custom evals and guardrails before reaching production routing decisions. Reduced redundant R&D escalations.
- **System-Level Intelligence:** Designed cross-module dependency mapping across CRM, OSS, BSS, Billing, DSCM, CPE, Mediation, and Network Management to surface downstream failure impact and recurring weak points.

System Engineer – L2/L3 OSS/BSS & Application Support

- **Incident Routing, MTTR & Escalation Management:** Accelerated critical fault resolution by 25%, reducing Mean Time to Resolve (MTTR) across BBNW, FTTH, and NGN modules from 40 to 30 minutes by re-engineering L1-to-L3 workgroup mapping and ASSIGN_GROUP routing logic (Zendesk, BMC Remedy), while preventing 30% of unnecessary L3 escalations by resolving L1 authentication faults and managing high-priority B2B client communications directly.
- **Platform Security & RBAC:** Secured system access for 2,500+ Pan-India telecom operators across the South Zone by executing strict Role-Based Access Control (RBAC) policies within Zsmart OSS and eliminating 250+ duplicate user profiles to optimize platform security.
- **SLA Compliance & Analytics:** Maintained 99.5% SLA compliance across 3 major tech hubs (Bengaluru, Pune, and Hyderabad) by analyzing daily and weekly operational intelligence reports (MIS, Pending Dockets, Average Ticket Duration) to systematically clear L2 bottlenecks.
- **Linux/Unix Log Analysis & RCA:** Minimized production downtime caused by critical backend exceptions by 40% through deep root cause analysis (RCA) on "Next Tache" calculation errors, parsing application logs within Linux/Unix environments to ensure high availability across microservices-based distributed systems.
- **API Validation & Infrastructure Config:** Mitigated 35% of critical interface integration delays at the ISAP and OFM portals by executing REST/SOAP API payload analysis in Postman, while eliminating operational provisioning bottlenecks for 1,200+ DSLAM/LMG network nodes under an Agile/Scrum delivery model.
- **Agile Delivery & Defect Management:** Accelerated day-to-day release stabilization by 30% through structured Agile artifacts (User Stories), functional flow testing, and defect tracking in JIRA — distinct from the platform-wide BSNL upgrade defect work captured under Key Project.

KEY PROJECTS

eDO AI — AI-Assisted Intelligence Layer for Telecom R&D Escalation Platform

Built via Whale Cloud Technology | Apr 2025 – Jan 2026

- **Retrieval & Reasoning Pipeline:** Built LangChain-based retrieval chains on **RAG + embeddings** for duplicate ticket detection and evidence-grounded resolution recall, orchestrated via **LangGraph** for multi-step RCA reasoning and structured triage decisions — tool access via MCP, human override retained on all routing.
- **Quality & Observability:** Built **eval suite** gating LLM output before production use; added **guardrails** for safety validation on auto-generated RCA/triage decisions; used **LangSmith** for tracing and debugging the reasoning pipeline end to end.
- **Cross-Module System Intelligence:** Designed system-level intelligence layer mapping **cross-module dependencies** across CRM, OSS, BSS, Billing, DSCM, CPE, Mediation, and Network Management — **8 telecom modules** — to surface downstream failure impact and recurring weak points.
- **Platform Capability Expansion:** Introduced retrieval, reasoning, and system-analysis capabilities not previously present in eDO, extending it from a manual R&D escalation portal into an **AI-assisted intelligence layer** for telecom incident handling.

Zsmart 9.2 Platform Upgrade | BSNL (Government of India)

Executed via Whale Cloud Technology & Tenet | Oct 2022 – Jan 2026

Delivered continuously on the same BSNL client engagement across two vendor partners as part of a standard IT services staffing transition.

- **Cutover & Release Stabilization:** Executed live cutover support and production validation for the Zsmart 9.2 upgrade across BSNL's **100M+** national subscriber base, successfully maintaining system availability and reducing planned migration window overruns by **20%**.
- **Data Integrity & Database Validation:** Secured post-release stabilization by executing targeted MySQL queries to audit backend data consistency, identifying and resolving **3,500+** critical database migration discrepancies before they impacted active billing cycles.
- **Microservices & Flow Validation:** Guaranteed seamless order activation across network layers by validating **40+** distinct end-to-end business flows, parsing system logs to resolve state-transition blocks within the modernized microservices architecture.
- **Functional Testing & Defect Management:** Executed rigorous functional test cycles across impacted modules (OSS/BSS, CRM, CPQ, DSCM), isolating complex platform bugs and systematically tracking **180+** critical defects in JIRA to ensure resolution before major deployment rollouts.
- **Core Network Integration:** Managed the operational integration of the Huawei CDOT voice module during the upgrade cycle, conducting real-time provisioning checks to ensure zero downtime for existing active directory lines.

EDUCATION

B.E. – Computer Science

Rajiv Gandhi Proudlyogiki Vishwavidyalaya, Bhopal | 2016 – 2020
