

YASH SOLANKI

Application Support Engineer | Functional Application Management

Voorburg, Netherlands | +31-682684403 | solankiyash2711@gmail.com

LinkedIn: [linkedin.com/in/yashsolanki27](https://www.linkedin.com/in/yashsolanki27)

Work Authorisation: Netherlands (HSM Visa – Transferable to IND Recognised Sponsors)

PROFILE SUMMARY

Application Support Engineer (**mid-level**) with 3+ years fixing root causes, not just tickets — across enterprise CRM and OSS/BSS platforms (ITIL v4, RCA, SLA-driven), including a **100M+ subscriber government telecom deployment (BSNL, India)**. Strong in Linux, MySQL, REST/SOAP APIs, and hands-on GenAI-assisted debugging and documentation. Currently at FGS B.V. in the Netherlands on a **transferable HSM visa**, open to Application Support, **Functional Application Management (Functioneel Beheer)**, and Production Support roles.

CORE SKILLS

Production Support: L2/L3 Application Support, ITIL v4 Incident Management, Root Cause Analysis (RCA), SLA Compliance, MTTR Reduction, Escalation Management

Telecom Domains: OSS/BSS, CRM, Order-to-Activate (O2A), Provisioning & Activation, NMS/EMS Networks (FTTH, BBNW, NGN)

Databases, OS & Cloud: MySQL (Data Validation), Linux/Unix, Microsoft 365, Azure Fundamentals, Microservices Architecture

Tools & APIs: Postman (REST/SOAP API), JIRA, Zendesk, BMC Remedy, Zsmart_OSS, ISAP/OFM Portals

Infrastructure & Scripting: DSLAM/LMG Node Configuration, BNG/OLT Device Assignment, Python, Git

Methodologies & Modern Ops: Agile/Scrum (User Stories), Release Deployment, GenAI-Assisted Diagnostics

PROFESSIONAL EXPERIENCE

Application Support Engineer – CRM Application Support

FGS B.V. | Rijswijk, Netherlands | Jun 2026 – Present

- **GenAI-Assisted Diagnostics & Automation:** Introduced Claude and Python scripting into CRM incident investigation, speeding up log parsing and cutting down manual documentation work during day-to-day support.
- **Release & Rollback Execution:** Supported post-release stabilization across 4 initial CRM deployments, catching and rolling back upstream integration faults before any reached production.
- **SLA & Incident Ownership:** Owned day-to-day incident resolution across Microsoft 365 / Azure AD — user access issues, workflow failures, sync errors — with no missed SLA since joining.

Senior System Engineer – Operations & Product Support (OSS/BSS)

Whale Cloud Technology India Pvt Ltd | Hyderabad, India | Apr 2025 – Jan 2026

- **SLA & Incident Management:** Optimized end-to-end Order-to-Activate (O2A) throughput by 18%, drastically reducing workflow exception queues across a 100M+ subscriber environment, by applying ITIL v4 incident management frameworks to resolve CRM-to-OSS state-transition blocks, collaborative waiting failures, and masterless order discrepancies via system refiring.
- **Linux/Unix Log Analysis & RCA:** Minimized production downtime caused by critical backend exceptions by 40% through deep root cause analysis (RCA) on "Next Tache" calculation errors, parsing application logs within Linux/Unix environments to ensure high availability across microservices-based distributed systems.
- **Microservices & Data Integrity:** Secured zero-defect data integrity between CRM and OSS by executing targeted MySQL database queries to resolve backend discrepancies, correcting spatial parameters for 2,400+ service instances, and driving cross-vendor bulk migrations of 55,000+ active directory numbers across CDOT, Huawei, and UTStarcom cores.
- **API Validation & Infrastructure Config:** Mitigated 35% of critical interface integration delays at the ISAP and OFM portals by executing REST/SOAP API payload analysis in Postman, while eliminating operational provisioning bottlenecks for 1,200+ DSLAM/LMG network nodes under an Agile/Scrum delivery model.
- **Agile Release & Defect Management:** Accelerated post-release stabilization and major platform upgrades by 30%, translating operational bottlenecks into structured Agile artifacts (User Stories), executing functional flow testing, and tracking defects in JIRA alongside Dev teams to prevent rollout failures.

System Engineer – L2/L3 OSS/BSS & Application Support

Tenet Computer and Communication Pvt Ltd | Bengaluru, India | Oct 2022 – Mar 2025

- **Incident Routing & MTTR:** Accelerated critical fault resolution by 25%, reducing Mean Time to Resolve (MTTR) across BBNW, FTTH, and NGN modules from 40 to 30 minutes, by re-engineering end-to-end L1-to-L3 workgroup mapping and correcting strict ASSIGN_GROUP routing logic across cross-platform ITIL ecosystems (Zendesk and BMC Remedy).

- **Platform Security & RBAC:** Secured system access for 2,500+ Pan-India telecom operators across the South Zone by executing strict Role-Based Access Control (RBAC) policies within Zsmart_OSS and eliminating 250+ duplicate user profiles to optimize platform security.
- **SLA Compliance & Analytics:** Maintained 99.5% SLA compliance across 3 major tech hubs (Bengaluru, Pune, and Hyderabad) by analyzing daily and weekly operational intelligence reports (MIS, Pending Dockets, Average Ticket Duration) to systematically clear L2 bottlenecks.
- **Escalation Management & L3 Deflection:** Prevented 30% of unnecessary L3 engineering escalations by managing high-priority B2B client communications (dockets, direct calls, emails) and resolving L1 user authentication faults immediately at the source.

KEY PROJECT

Zsmart 9.2 Platform Upgrade | BSNL (Government of India)

Executed via Whale Cloud Technology & Tenet | Oct 2022 – Jan 2026

Delivered continuously on the same BSNL client engagement across two vendor partners as part of a standard IT services staffing transition.

- **Cutover & Release Stabilization:** Executed live cutover support and production validation for the Zsmart 9.2 upgrade across BSNL's **100M+** national subscriber base, successfully maintaining system availability and reducing planned migration window overruns by **20%**.
- **Data Integrity & Database Validation:** Secured post-release stabilization by executing targeted MySQL queries to audit backend data consistency, identifying and resolving **3,500+** critical database migration discrepancies before they impacted active billing cycles.
- **Microservices & Flow Validation:** Guaranteed seamless order activation across network layers by validating **40+** distinct end-to-end business flows, parsing system logs to resolve state-transition blocks within the modernized microservices architecture.
- **Functional Testing & Defect Management:** Executed rigorous functional test cycles across impacted modules (OSS/BSS, CRM, CPQ, DSCM), isolating complex platform bugs and systematically tracking **180+** critical defects in JIRA to ensure resolution before major deployment rollouts.
- **Core Network Integration:** Managed the operational integration of the Huawei CDOT voice module during the upgrade cycle, conducting real-time provisioning checks to ensure zero downtime for existing active directory lines.

EDUCATION

B.E. – Computer Science

Rajiv Gandhi Proudhyogiki Vishwavidyalaya, Bhopal | 2016 – 2020
